TOUR·e

India's taxi market is going electric by law.
Tour-e keeps it Maruti's.

The electric ride-service MPV for India 2035: a fleet version of Maruti's HEARTECT-e MPV, sold with a per-km battery EMI and charged at Maruti driver hubs.

2030
Delhi's aggregator rule: every ride-hailing fleet fully electric

3×
CAFE III counts every battery EV three times, from April 2027

~3%
Maruti's share of India's EV car sales today, vs ~42% for Tata

Delhi Motor Vehicle Aggregator & Delivery Service Provider Scheme 2023 · CAFE III notification (Autocar Professional) · Vahan registrations, Sep 2026 (Rushlane) · 3D base model: "Maruti Suzuki XL6" by BHP3D, CC BY 4.0, modified

MARKET 2035 · WHERE THE VOLUME AND THE MARGIN SIT

Intra-city trips bring the volume. Airport, inter-city and accessible rides bring the margin.

$14–15 bn
India ride-hailing market in 2035
(team estimate from GVR's 2025–33 curve)

60.8%
of India's taxi trips are intra-city
(2025)

19.1%
CAGR for airport transfers, the
fastest-growing use case

1.9 lakh
Ertigas sold in FY25, India's No.1 MPV;
5 lakh+ Maruti Tour taxis sold

USE CASE	ROLE	TOUR-E ANSWER
Intra-city on-demand	Volume	City, 5 seats, ~307 km a charge
Daily commute / corporate	Steady demand	Pooled 7-seat shuttle
Airport transfers	Margin	5 seats + ~400 L boot, kerb-side door
Inter-city	Margin	Tour-e Long (61 kWh); CNG off-corridor
Shared / premium / accessible	Niche margin	Premium trim and the Tour-e WAV

Grand View Research (team extrapolation to 2035) · Mordor Intelligence, India taxi market 2025 · Autocar Professional (Ertiga FY25) · Maruti Suzuki (Tour range)

VEHICLE CONCEPT

The MPV shape India already buys, rebuilt around the rider and the driver.

Kerb-side powered sliding door open: riders step out onto the pavement. Captured from the interactive 3D model.

SIZE
~4.4 m compact MPV, Ertiga-class footprint

SEATS
5+2: five in comfort, two pooled seats folded flat

BODY
Tall MPV on the HEARTECT-e skateboard, flat floor

DOORS
Kerb-side powered sliding door, ≥720 mm opening

BOOT
~400 L in 5-seat mode, no CNG tank in the way

ACCESS
Folded wheelchair fits; WAV variant with ramp

Why this shape: drivers already run Ertigas, riders already trust them, and the sliding door lets people step onto the pavement, not into traffic.

Toyota JPN Taxi (sliding-door benchmark) · Bharat NCAP (e VITARA, five stars) · 3D base model: "Maruti Suzuki XL6" by BHP3D, CC BY 4.0, modified

POWERTRAIN & ENERGY

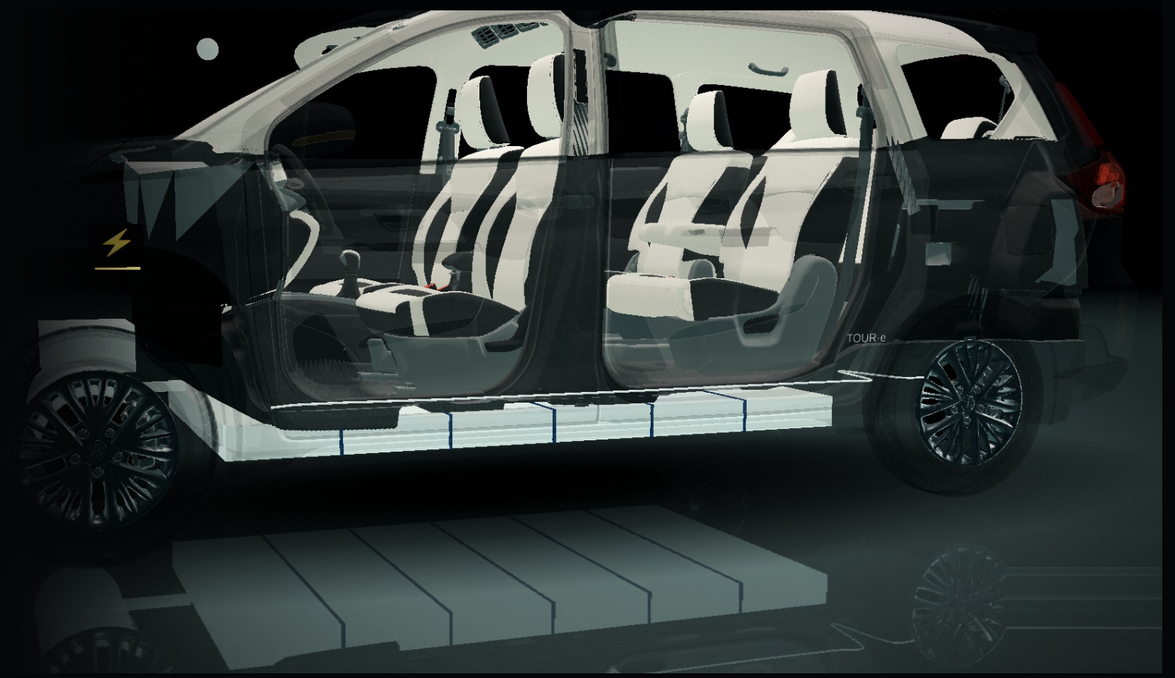

BEV first, not BEV only: the e VITARA pack, sized to a full taxi day.

49 kWh — LFP pack carried over from the e VITARA (46 kWh usable). No new pack to develop.

307 km — real-world city range with the AC on. A 200–250 km duty day fits on one overnight charge.

215 km — still left at 70% battery health: an owner-driver's 200 km day is covered for the whole battery life.

61 kWh — Tour-e Long for inter-city corridors: 317 km at highway speed.

X-ray view: the pack sits under a flat floor between the axles.

WHY NOT CNG OR HYBRID

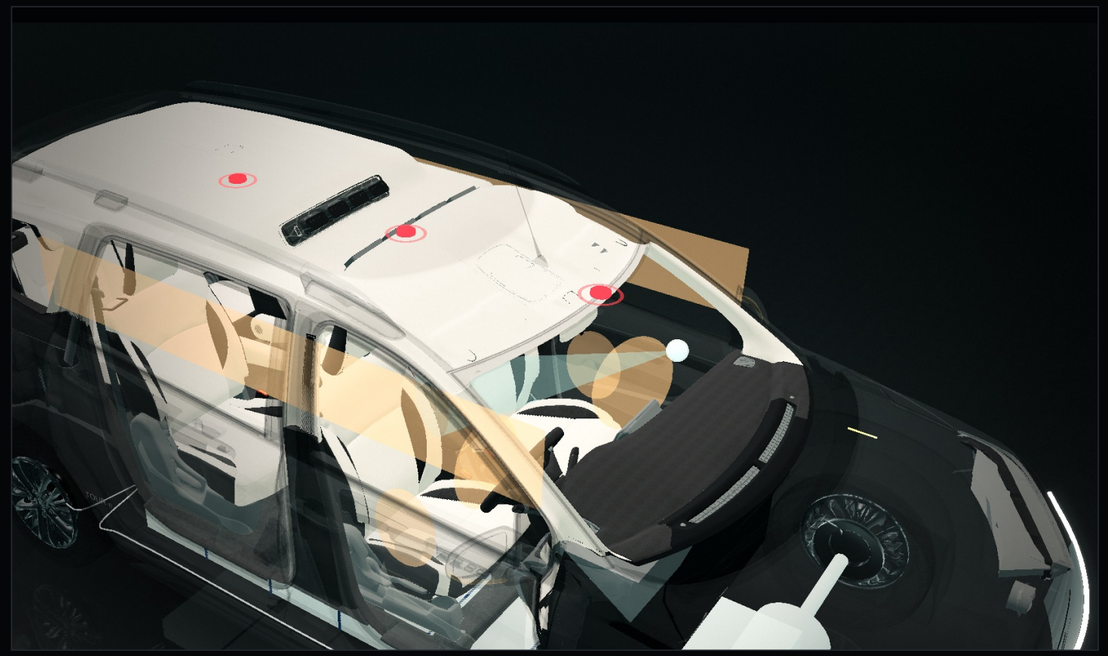

GST is 5% on EVs and 40% on CNG MPVs over 4 m. Energy costs ₹1.87/km on depot power vs ₹4.25/km on CNG. CNG stays as the bridge (Ertiga Tour M) where charging is thin.

Maruti Suzuki e VITARA specifications (49 / 61 kWh LFP) · GST Council, GST 2.0 (22 Sep 2025) · Team model: Inputs, BaaS, Driver_Economics sheets · 3D base model: "Maruti Suzuki XL6" by BHP3D, CC BY 4.0, modified

TECHNICAL SPECIFICATIONS & SAFETY

Specified for 4 lakh km of taxi duty, and for what riders and drivers ask for.

SPEC	TOUR-E
Battery	49 kWh LFP, liquid-cooled · 46 kWh usable
Range	~307 km city, AC on · 317 km highway (Long)
Charging	DC 10–80% in ~45 min · 7.4 kW AC overnight
Motor	106 kW front eAxle (e VITARA)
Design life	4 lakh km / 5 years, battery EMI-backed
Safety	6 airbags · ESP · AEB · five-star Bharat NCAP target

SOS over every row · Six airbags, curtains to row 3 · Driver drowsiness camera

BUILT FROM WHAT RIDERS AND DRIVERS COMPLAIN ABOUT

Rider controls the rear AC
roof-liner ducts, a vent over every seat

SOS in every row
self-tested daily by FleetOS

No child lock in taxi mode
kerb-side door opens at every stop

Break reminders
from the driver camera, not a timer

Pre-cooled cabin
cooled on the plug before a shift

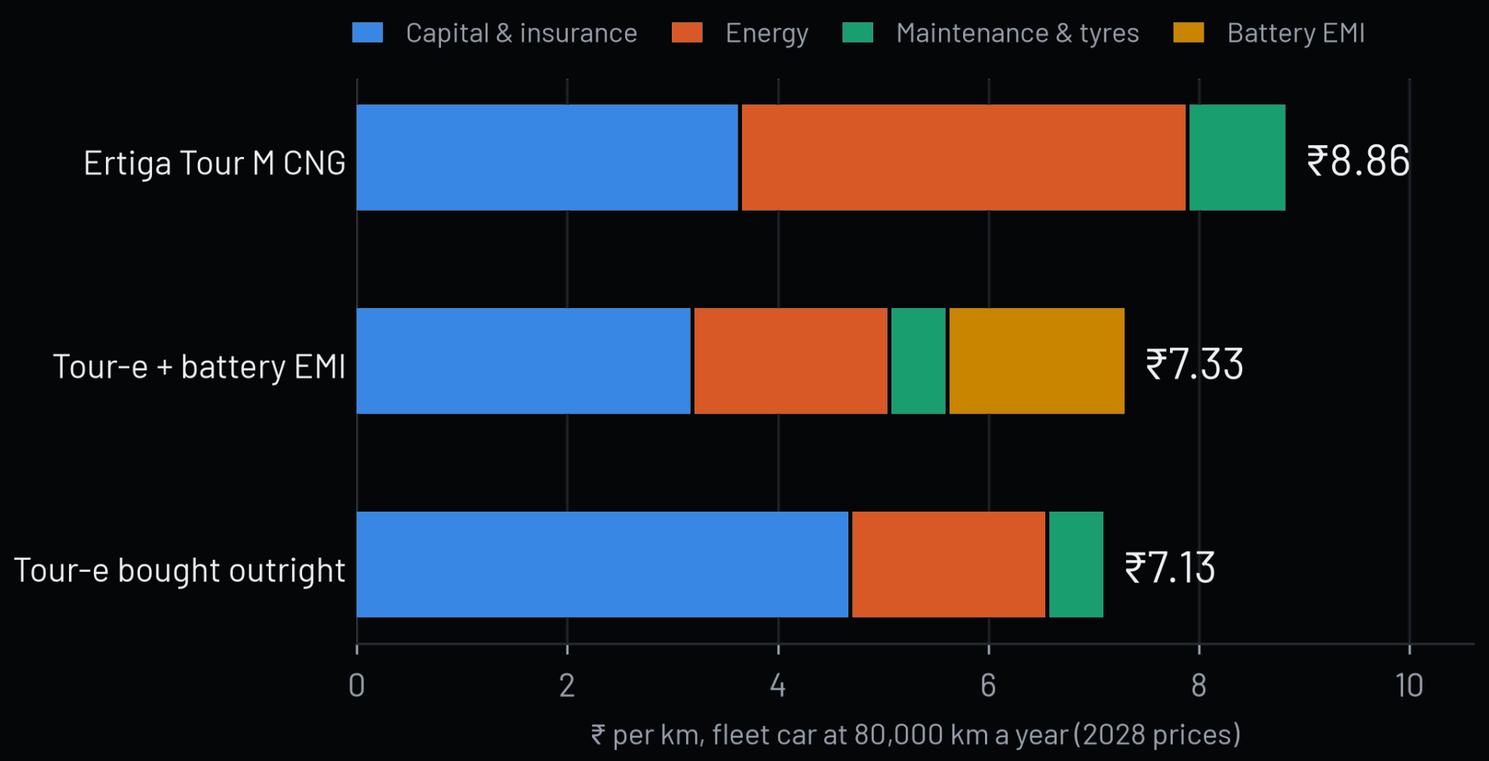

Charging slots
booked in the driver app, on tariff

Rider and driver complaints on Reddit, Team-BHP and app-store reviews of Uber / Ola / Rapido (team research, 2026) · Bharat NCAP · Team model: Inputs · 3D base model: "Maruti Suzuki XL6" by BHP3D, CC BY 4.0, modified

TOTAL COST OF OWNERSHIP · FLEET

Cheaper on day one. Cheaper every kilometre.

A fleet car on the battery EMI costs ₹1.55 lakh less to buy than an Ertiga Tour M CNG, and ₹1.53 less to run every kilometre.

₹9.20 L
battery-EMI car vs ₹10.75 L Ertiga Tour M CNG

₹1.22 L
saved per car per year on battery EMI
(₹1.38 L bought outright)

₹12.2 cr
a year for a 1,000-car fleet

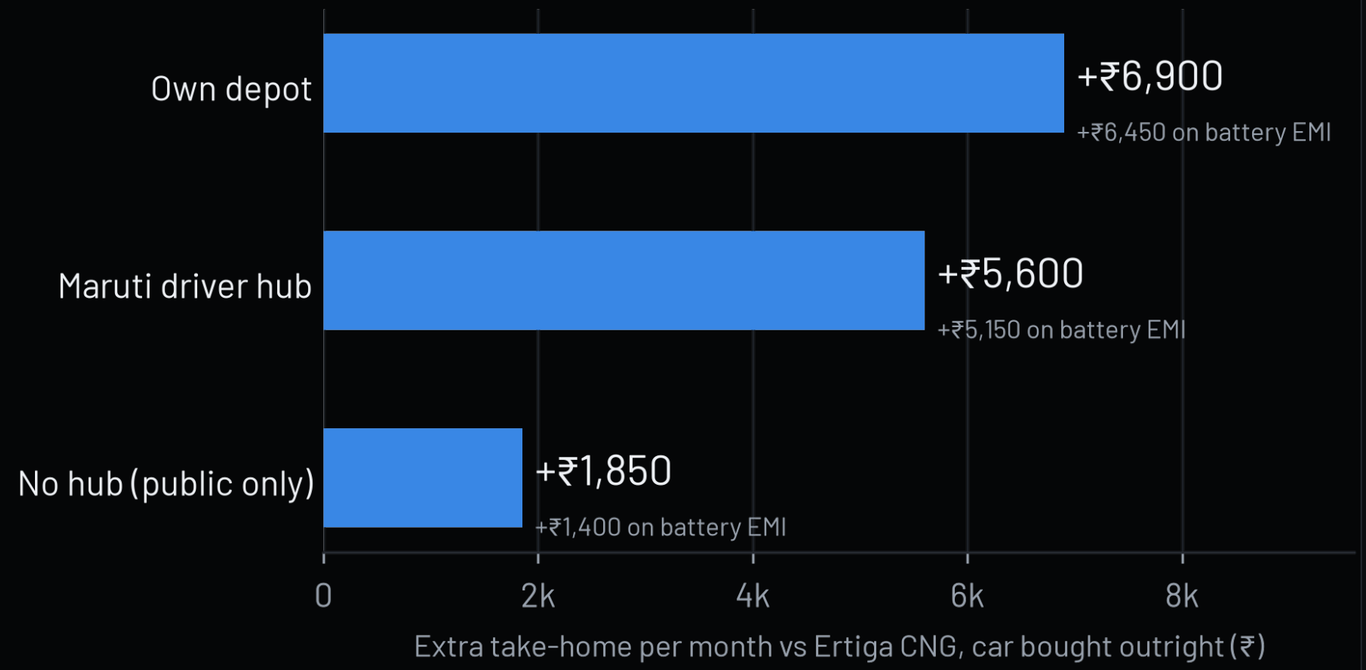

₹6.92 L
saved per car over 5 years, bought outright

Team model, TCO and Fleet_Economics sheets: 5 years, 10.5% finance, 80% depot @ ₹9 + 20% public DC @ ₹20/kWh, CNG ₹85/kg at 20 km/kg, 3% insurance, EV road-tax waivers excluded

DRIVER EARNINGS & MARUTI DRIVER HUBS

₹67,000 more a year for every driver who charges at a Maruti hub.

Owner-drivers without a depot charge overnight at Maruti dealer and service workshops. Charging access is the swing factor, so the hubs are part of the product.

IT HOLDS UP UNDER STRESS

+₹10,000
a month by 2035, as pack and car costs fall

+₹3,250
a month even if the battery were leased with 18% GST

₹64/kg
CNG would have to fall this low to erase the gain (Delhi ₹87 today)

Team model, Driver_Economics, Sensitivity and Scenario_2035 sheets: 60,000 km a year (200 km a day), hub tariff ₹11/kWh, public DC ₹20/kWh. The uplift does not depend on fares.

COST, PRICE & THE MARUTI CASE

Priced off Maruti's own cars, and it pays back by 2033.

TWO ANCHORS FOR THE NON-BATTERY COST (₹ LAKH, 2028)

ANCHOR	₹ L
From Ertiga Tour M (bottom-up)	7.78
From e VITARA Delta (top-down)	8.23
Tour-e cost stack, chosen	7.80

PER CAR	2028	2035
Ex-factory cost	11.72	9.97
Price, bought outright	13.82	11.76
Price on battery EMI	9.20	8.01
Battery EMI, ₹/km	2.1 (1.7 at 80k km)	1.7

₹1,500 cr
programme capex: sliding-door body, taxi trims, validation, FleetOS and battery-EMI set-up

2033
capex fully recovered from the R&D line in each car, at 10k to 1 lakh units a year

3.8×
Tour-e's 2031 volume vs Maruti's entire EV sales today

1.5 lakh
CAFE III credit-equivalent units in 2031 (50k BEVs × 3)

Team model, Price_Walk, Cost_Price, BaaS and Maruti_Case sheets · Ertiga Tour M ₹10.745 L and e VITARA Delta ₹10.99 L (BaaS) / ₹15.99 L (Maruti Suzuki, 2025–26 price lists)

No car is sent on a trip it can't finish.

FleetOS joins the car, the operator, the driver, the rider and the financier with one data layer.

Car

- State of charge and health, cell temperatures
- Fault codes, tyre pressure
- Driver-camera alerts, SOS self-test
- GPS over 4G / 5G

→

FleetOS intelligence

- Battery-aware dispatch
- Charging slots on tariff and depot load
- Predictive maintenance
- Pre-cooling before each shift

→

Driver & rider

- Driver: ₹/km earnings, charge planner, break reminders
- Rider: 5-seat, 7-seat or WAV booking
- Rear AC control, SOS, route alerts

→

Finance

- Per-km battery EMI billing
- Battery passport backs the resale value
- Usage-based insurance

So what: fewer stranded cars, charging at the cheapest hour, and a battery whose health is on record, which is what lets Maruti finance it per km.

IMPLEMENTATION ROADMAP

Prove it on the e VITARA, launch with fleets, then scale across India.

2026–28 PROVE

- FleetOS + battery-EMI pilot on e VITARA with 2–3 fleets
- Delhi NCR, Bengaluru, Mumbai
- First Maruti driver hubs at dealers

2028–31 LAUNCH

- Tour-e in production: 10k in 2028, 50k a year by 2031
- Airport and corporate fleets first
- Pack, BMS and thermal localised; cells dual-sourced

2031–35 SCALE

- ≥1 lakh a year by 2035
- Driver hubs into Tier-2 cities
- Tour-e Long on inter-city corridors; WAV

KEY RISKS → WHAT WE DO

Heat and battery fade	liquid cooling, pre-cooling, risk reserve in the battery EMI
Charging gaps	depots for fleets, Maruti driver hubs for owner-drivers, CNG bridge
Import dependence	dual-sourced cells, ACC-PLI, reduced rare-earth motor by 2031
Resale value	battery passport and assured buy-back of the pack
